

# Business Engineer

London, UK

[Apply to job](#)

Business Engineering is looking for impact-focused, entrepreneurial engineers ready to bring their ideas and make a difference. We are technology experts that apply our software engineering skills to bring a unique blend of business and technology expertise to ensure our partners succeed. Our team is at the intersection of business and innovation where you will execute on solving real-world business challenges through Meta's platforms and community in many of today's most exciting industries and products. These include Video, Commerce, Monetization, Metaverse, Gaming, Creators, AI, Messaging and more.

You will write scalable production-grade code across Meta's platforms in collaboration with other product engineering teams. You will get to learn and build on different tech stacks and languages. You will use your entrepreneurial passion and the freedom that the role provides to create your own opportunities and choose how you make an impact.

The work we do exceeds the boundaries of what is possible quickly, and at scale. Our work transcends technology and ensures the solutions we build translates into prosperity for all. Our code is designed to engineer and accelerate business growth. Growth is great. Rapid growth is better. Our approach aims to maximize positive impact for our partners as well as the billions of people that use their products and services.

---

## Business Engineer Responsibilities

- Build new products and improve existing ones in collaboration with Meta product engineering teams and cross functional partners to meet business needs
- Understand and apply deep knowledge of products, technologies, and business to build solutions to solve for problems at scale

partners, and independently resolve complex technical and business needs

- Use expertise and product insight to deliver high-quality project/integration/partner engagements, while influencing product roadmap to meet the business needs
- Guide workflow changes, and gain consensus from stakeholders while driving toward solutions
- Respond and maintain effective communication with industry partners and internal stakeholders
- Work with partners to develop a long- term strategic plan, grounded on business objectives, and manage partners during integrations with Meta's platform products and ensure value creation
- Build and manage strong working relationships with technical counterparts. Mentor and share knowledge with peers, creating positive atmosphere amongst team
- Coding, code reviews and provide constructive feedback while quickly actioning feedback from code reviews conducted of your code
- Influence decision-making through presentation of data-centric business topics
- Serve as a subject matter expert within Business Engineering and provide consultation on domain-level projects
